

# MALUK CHARDAK' 1990 NEAR PLOVDIV: AN UNPUBLISHED LATE ROMAN REPUBLICAN HOARD FROM THRACE<sup>1\*</sup>

---

Ilya PROKOPOV, Evgeni PAUNOV

This paper aims to discuss and analyse a sizeable, hitherto unpublished<sup>2</sup> Roman Republican hoard of some 530 silver coins of the 2<sup>nd</sup>-1<sup>st</sup> century BC. Thus it will throw fresh light on the economic and monetary relations of the Thracian kingdom with late Republican Rome. Moreover, this hoard is linked with other numismatic evidence from Thrace as well as neighbouring areas.

## Provenance

The actual discovery was made near the village of Maluk Chardak (20 km northwest of Philippopolis/Plovdiv).<sup>3</sup> It was a chance find so the archaeological context and possible attributions remain unclear. During the spring of 1990 while an excavation machine was widening a water ditch in the locality of 'Pereto' in the northwest end of the village, a quantity of coins were unearthed.<sup>4</sup> This was followed by archaeological trial digs and a careful metal-detecting survey.<sup>5</sup> Unfortunately no other archaeological evidence was able to be found at the find spot. No traces of a solid container for the coins were discovered either. In all, a total of 529 coins and a silver bracelet were collected. In other words, 417 and 112 specimens

<sup>1\*</sup> Authors thank Dr Kostadin Kissiov (director of the Archaeological Museum in Plovdiv) and Ms Dessislava Davidova (keeper of the Plovdiv coin collection 1993-1996, 2000-) for their assistance and cooperation during this research. We also express our warm gratitude to Professor Dr François de Callataÿ (Bibliothèque royale de Belgique, Brussels), Dr Bernhard Woytek (Numismatische Kommission, Vienna) and Mr Phillip Davis (HJB Inc., Chicago) for their valuable suggestions and improvements of the text.

<sup>2</sup> The Maluk Chardak hoard was only briefly mentioned by De Callataÿ – Prokopov 1995, p. 10, note 9. Later it was summarized by Paunov – Prokopov in the inventory *IRRCHBulg*, 2002, 69-70, no. 115, table 11 (erroneously giving a total of 602) as well as in Prokopov 2006, p. 242, no. 174 (repeating the same).

<sup>3</sup> Saedenie municipality, district of Plovdiv, GPS coordinates: 42.29327 N, 24.62963 E, altitude 212 m.

<sup>4</sup> The hoard was first noticed by three workmen operating the excavator – Messrs. Iliya Dimitrov, Dimiter Dimitrov and Rangel Trifonov, who brought the coins to museum in Plovdiv.

<sup>5</sup> A team was lead by Dr Kamen Kolev, the former keeper of coin collection in the Plovdiv museum, 1964-1993. Details and circumstances of the discovery are duly extracted from the inventory book and archive of the Plovdiv Regional Archaeological Museum. No published records.

respectively, and the total sum entered in June 1990 the numismatic collection of the Plovdiv Archaeological Museum recorded under inventory numbers 5769 and 5770. However, it must be explicitly stated that this was not an undisturbed and complete hoard.<sup>6</sup>

No extant archaeological sites<sup>7</sup> or finds are registered from the plain fields of Maluk Chardak near Plovdiv. Nevertheless, a substantial group of 6-7 Thracian burial mounds (1.5-2 km east from the village) is visible to the north of the hoard find spot. The nearest recorded site is located 2 km to the north at the SW end of village of Golyam Chardak.<sup>8</sup> It is a large settlement of the Roman Imperial period.<sup>9</sup>

## Contents

### Jewelry

Together with the bulk of coins a small bracelet was deposited within the *Maluk Chardak hoard* (Fig. 1a-b). It measures 4.1 x 3.7 cm, weight 21.155 g. The bracelet is made of a rectangular silver lamella with meeting finials, spirally twisted on the top side. It seems that the bracelet belongs to a very popular Late La Tène type, characteristic of the so called horizon of ‘Dacian hoards’, with or without coins included (Rustoiu 1996, Pop 2008). Their common area of distribution is Transylvania in modern Romania, with few finds south of the Danube<sup>10</sup>. Most of them are dated to the 1<sup>st</sup> century BC.<sup>11</sup>

### The Coins

The main body of the hoard from Makuk chardak is the coins. It includes 529 silver specimens of the following denominations and types:

A rather worn Athens ‘New Style’ tetradrachm (Fig. 2) with the magistrates’ names ΕΠΙΓΕΝΗ – ΣΩΣΑΝΔΡΟΣ, and moneyer ΚΑΛΛΙΚΡΑ. Additional symbol – eagle standing on fulmen in the left field, A – on amphora for the month, below ΣΦ (illegible).

The standard reference on the late Athenian coinage by Margaret Thompson dates this series to 158-157 BC (Thompson 1961, 173, pl. 45, no. 442c-d). According to the alternative low chronology of Lewis-Boehringer (Boehringer 1972, 201; Lewis 1962, 281-300) it must be diminished by 32 years, or ca. 126-125 BC. A recent epigraphic affirmation of this dating is proposed by C. Habicht (Habicht 1991, 1-23).

A Thasos imitation tetradrachm (Fig. 3), executed in rough barbarian style (similar to Göbl 1973, Klass V, taf. 48-49; Lukanc 1996, pls. 150-151). No identical die combination is registered so far (cf. Prokopov 2011, pl. 3.12). This specimen falls into group 3 of the Thasian imitations (Prokopov 2006, 56; Prokopov 2011, 339-342, pl. 3), where proper

<sup>6</sup> Reportedly treasure-hunters and detectorists had unearthed about 100 coins of the same hoard, all dispersed in trade (no records, unconfirmed information).

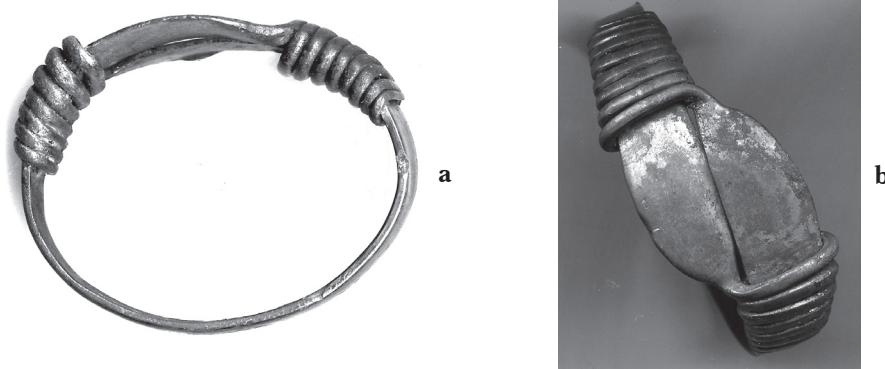

<sup>7</sup> A search in the ‘AMB’-system (‘Археологическа карта на България’ / Archaeological Map of Bulgaria digital database). Information courtesy of Dr Georgi Nehrizov, National Archaeological Institute and Museum, Sofia, database checked on 15 December 2010.

<sup>8</sup> Цончев 1950, 254, fig. 28.

<sup>9</sup> Date most probably of the 2<sup>nd</sup> to the 4<sup>th</sup> century AD: numerous pottery sherds, bricks and tiles as well as a bronze coin of Caracalla (209-212 AD) of Philippopolis mint.

<sup>10</sup> For instance the so-called ‘Cheljushnitsa’ hoard of silver ornaments, see the discussion in Тонкова 2006, 434-436. For similar type of bracelets in the early Roman Imperial period – Slokoska 1991.

<sup>11</sup> E.g. Pop 2008, 71-75, figs. 66, 92 – Şimleu Silvaniei hoard no. 5 – three bracelets and a torque as well as 36 Republican *denarii* down to issues of Augustus for C. L. CAESARES, 2/1 BC (Wolters 2002, 321-322).

*Fig. 4. Hybrid-imitation of Republican denarius from Maluk Chardak. Photo: I. Prokopov, 1993*

Scaled 2:1

legends disappear instead of dots and lines, and corrupted, abstracted images of Dionysus and Heracles. It might be strictly dated to the period ca. 60-40 BC; the latter is more probable because of the other coins.

A 'Balkan'<sup>12</sup> hybrid-imitation of Republican denarius (**Fig. 4**). The obverse prototype belongs to issue of the moneyer C. Calpurnius Piso L.f. Frugi (Cr. 408/1); the reverse prototype of Q. Minucius M.f. Thermus, 103 BC (Cr. 319/1). Therefore, this imitation should be dated no earlier than 61 BC. A similar hybrid combination appears in the recent classification of Phillip Davis (Davis 2006, 343, no. 114 [author's collection]), though struck from different dies.

Roman Republican denarii: 526 (520 identified), ranging from 'Anonymous' issues (with additional symbol 'bird and TOD') struck in 189-180 BC (Cr. 141/1) down to an issue of Mark Antony and Octavian, struck in 39 BC in an Italian mint (Cr. 528/2b).

<sup>12</sup> Authors did not label this coin series with ethnic names such as 'Dacian', 'Thracian', etc.

## Discussion and comments

The *Maluk Chardak* 1990 is a mixed hoard by its nature – consisting of numerous Republican issues and two tetradrachms of Late Hellenistic types. This is not unusual for the period under study (Prokopov 2009, 447-453; Prokopov 2006, 56). Moreover, other hoards from the Plovdiv region in South Bulgaria show a similar pattern and association. Some examples are Kolyu Marinovo (Златарева 1960, 367-378; Prokopov 1995, 451-454; *IRRCHBulg.* 109), Topolovo (Златарева 1963, 161-171; *IRRCHBulg.* 129), as well as the Karavelovo hoard (*IGCH* 978; *IRRCHBulg.* 108). In general, this mixing up of denominations is not an exception in the 1<sup>st</sup> century BC coin hoards from the Balkans – Thrace, Dacia, and Macedonia, as well for Asia Minor and the Aegean islands<sup>13</sup>.

The Athenian New style tetradrachm from Maluk Chardak belongs to magistrates' issue (ΕΠΙΓΕΝΗ – ΣΩΣΑΝΔΡΟΣ), one of the 'over-represented' series in the hoards from Macedonia and south Thrace (according to Callataÿ 1994, 12-20). This magistrate combination (with ΚΑΛΛΙΚΡΑ) had occurred in the following hoards from Thrace<sup>14</sup>:

On the other hand, *Maluk Chardak* hoard is the most representative group of Republican

	<b>TOTAL:</b>						<b>529</b>

denarii found in Thrace so far<sup>15</sup>. The bulk of the hoard is comprised of denarii of the late 2<sup>nd</sup> to the mid-1<sup>st</sup> century BC. The highest influx of issues falls into the year 90 BC (Cr. 340, 341 and 342) – 60 pieces in total (11%). This was a year marked by an enormous production of silver coins by the mint of Rome to finance the ongoing Social War. In contrast, the quantity of denarii struck after 77 BC (Cr. 387/1) was relatively small. Quite surprisingly, Maluk Chardak hoard omits not only the very common Gallic mint issue of Caesar, 49 BC (Cr. 443/1; Woytek 2003, 119-132, nos. 37-45; Woytek 2005, 643-648), but also all other Caesarian denarii down to 44 BC. Denarii of Cn. Pompey and his supporters (Crawford 1974, nos. 444-447 and 459-462) which are normally rare, are also missing. The latest types present in quantity are issues of moneyer T. Carisius (Cr. 464), 8 coins in all. No issues struck between 46 and 42 BC are present here, and the single denarius of Mark Antony (Cr. 496/2) is broken and damaged.

The profile of the composition is clearly ‘archaic’, i.e. earlier coins largely predominate. This however may result from the disturbed nature of the hoard<sup>16</sup>, giving an anomalous chronological structure. The latest, least-worn coins are the most likely to have been dispersed in trade. The precise pattern of accumulation is presented in graph no. 1 (*page above*).

Additionally, a good number of the earlier Republican issues (roughly from 148 down to 49 BC) were marked by banker’s (*nummularii*) punches, which is not an isolated case. These monetary activities (money-testing and money-changing) occurred at Rome throughout the 1<sup>st</sup> century BC but most frequently in the years 60s-40s BC.<sup>17</sup> Moreover, there here are also five gauged<sup>18</sup> coins out of 526, running from Cr. 342/4, 90 BC down to Cr. 408/1b, 61 BC. This number makes nearly 1% (precisely 0.95) of the total and fits into the average statistics of 2% (Stannard 1993, 46). Seven denarii are brockages (an error during the intensive striking process).

Relative to the extant Republican hoards (Lockyear 2007, 131) of the period 40-36 BC, *Maluk Chardak 1990* is also very large. In juxtaposition with others the closest chronological parallel to the hoard in consideration is the Poroschia hoard (found in 1964, Alexandria region, south Romania, *RRCH* 436)<sup>19</sup>. The volume, accumulation profile and closing date of both hoards are very similar. A key difference between the two must be noted here: that Poroschia was so rich in die-linked imitations of genuine denarii.<sup>20</sup>

What is of particular interest is the association of coins with silver jewelry. *Maluk Chardak 1990* is atypical of Thracian hoards in that Roman Republican coins are associated with jewelry. A similar combination of coins and objects is found in only a few hoards in Thrace.<sup>21</sup> However,

<sup>15</sup> Larger than Guljantzi/1957 (458 denarii – *RRCH* 377 = IRRCHBulg, 27) and Koynare I/1963 (339 denarii and 2 drachms – IRRCHBulg, 110), no other sizeable *denarii* hoards are preserved and documented (not to mention here the unpublished ‘Zverino’/2000 hoard – 503 denarii down to Augustus, issues for C. L. CAESARES, 2/1 BC (RIC I<sup>2</sup>, 208-212; for the dating see now Wolters 2002, 322-323). A series of similar in size and larger hoards such as the Filipovtsi/1922 (464 denarii, unspecified – cf. Мушмов 1922, 242-243 = IRRCHBulg, 16) are known but were never published.

<sup>16</sup> See note 6.

<sup>17</sup> On the problems relating the introduction and presence of Athenian New Style ‘stephanophoroi’ in Thrace see now Прокопов 2011, 81-99.

<sup>18</sup> A common practice in Republican Rome undertaken in order to adjust the weight of denarius blanks *al marco* with a cut on the metal surface, see Stannard 1993, 45-46.

<sup>19</sup> Chițescu 1980, 53-80; Moisil-Depeyrot 2003, 126-131, no. 126; Lockyear 2007, no. 364 – pot hoard of 552 *denarii* including 64 imitations, down to Cr. 528/3, 39 BC.

<sup>20</sup> See recently Davis 2010, 249-253.

<sup>21</sup> E.g. the hoards from Vratsa area-‘Haemus’/2006 [silver torque, 2 bracelets and 3 rings – Paunov-Prokopov 2012 /forthcoming/, the unpublished Belitsa/1956 (silver cup and 3 small ingots – IGCH 976 = IRRCHBulg, 101), Garvan/1912 (1 silver bracelet – Филов 1913, 336; Seure 1923, 17, no. 8 = IRRCHBulg, 77), and the Gradeshnitsa III/1964 (7 bracelets - Герасимов 1966, 212; Gerov 1977, 399, no. 4; IRRCHBulg, 80 – down to Trajanic issues of

it is quite common in the hoards from Dacia and elsewhere in central and south Europe.<sup>22</sup> Therefore this association appears to be a usual practice in the 1<sup>st</sup> century BC hoards along the Lower Danube (mentioned by Crawford 1985, 229, n. 25), when coins were often kept and concealed with other valuables.<sup>23</sup> The silver bracelet may be regarded from its owner/s as bullion metal as well.

### Closing Date & Burial

Only two Late Hellenistic tetradrachms in a hoard of originally over 600 coins reveals it was concealed at a time when Roman *denarii* were decisively taking over from the older Greek-type issues (see Prokopov 2000, 375-386; *IRRCHBulg*, 89-91). It seems likely that the two tetradrachms were added last to an existing accumulation of Republican *denarii*.

Let us make a brief historical excursus here in order to describe the Roman presence in Thrace more thoroughly and eventually link it to the *Maluk Chardak 1990* hoard. Between the middle of 44 and late 42 BC Macedonia and southern areas of Thrace were ruled by Marcus Brutus (Collart 1931, 423-429; Woytek 2003, 380-381, 512), after he ousted Lucius Antonius. Sometime in the summer of 43 BC Brutus led a successful campaign against the Bessi in the Rhodopes. He got the support of King Rhaiskouporis [I] from Bizye (App., Civ., 4, 87; Cassius Dio 47.25, 1-2), and in addition a few other Thracian chieftains submitted to him. While in Thrace, Brutus continued to gather more soldiers and money. It was Polemocratia, the widow of the Thracian dynast Sadalas II, who consigned the entire Thracian treasury to Brutus, in return for protecting her infant son (the future Sadalas III). Appian states that Brutus among the treasures he found an unexpected quantity of gold and silver, which he coined and converted into currency (App., Civ., 4. 75; Woytek 2003, 380-381). The double battles at Philippi occurred next in October 42 BC (Appian, 4. 82; Cassius Dio, 47, 48, 2; Collart 1937, 190-219; Crawford 1985, 251; Woytek 2003, 388-391). It was a time when Thracians had hedged their bets on the battle: Cotys, king of the Odrysae, had sent Rhaiskos, one of his sons, to Antony and the Caesarian camp; and the other, Rhaiskouporis, to the Republican side (Appian, 4.87-88, 4.136), each one with a 3.000 cavalry force. Days before the decisive battle of Philippi, Brutus had ordered extra payments (*donativa*) of 1000 *denarii* to be made to each soldier (*viritim*), double or respectively more to officers (Appian, 4.118; Woytek 2003, 390 and 552).

As a matter of fact, one of the *denarii* from the hoard under study dates exactly from these events – the broken and worn out issue of Mark Antony (**Fig. 5**) was struck in a camp mint in North Greece (Cr. 496/2; Woytek 2003, 489-492, nos. 265-266 – suggesting Buthrotum). Most probably it was added into the hoard shortly after.

The closing date of *Maluk Chardak hoard* is set by its latest issue attested – a *denarius* of the triumvirs Mark Antony and Octavian (Cr. 528/2b), struck after the pact of Brundisium in late 40 – early 39 BC.<sup>24</sup> Again, we must acknowledge that perhaps not the entire hoard was

AD 108/9–111 (COS V PP /SPQR OPTIMO PRINC, RIC II, 129 and 162 = Woytek 2010, no. 282 and 218c/e).

<sup>22</sup> E.g. *IGCH* 586, 600, 625, 641, 648, 650, 662, 674, 685; and *RRCH* 75, 91, 280, 329, 331, 403, 411, 456, 470, 484, 505, 535, 546.

<sup>23</sup> Naturally this phenomenon is not confined only to Dacia and Thrace but elsewhere, compare the index of hoards in Crawford 1969, 168 (listed above, note 20).

<sup>24</sup> For a recent discussion of the date of this series – see Sear 1998, 164-165.

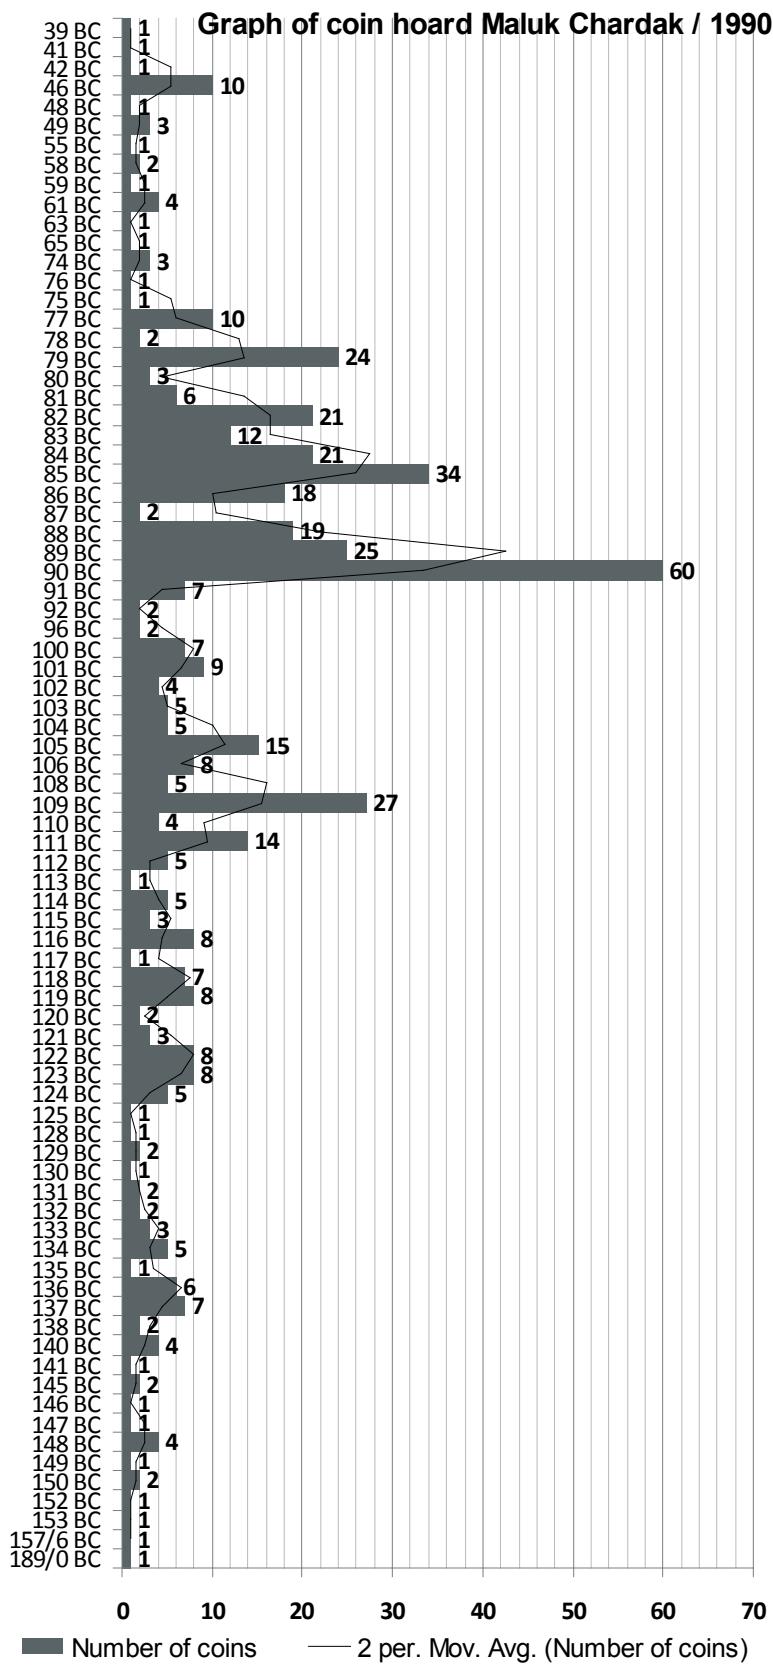

Fig. 5: Chronological structure of Maluk Chardak hoard (Excel-chart).

recovered.<sup>25</sup> Therefore, is it possible that denarii of a later date were present within the hoard but are now missing in the Plovdiv museum.

Consequently, we do suggest – the *Maluk Chardak 1990 hoard* may well belonged to some mercenary returning home from the south (Macedonia or north Greece), bringing back his cash wages. Nonetheless, the composition and structure of *Maluk Chardak hoard* is not characteristic of the Thracian coinage pool.

### Roman Republican hoards around Philippopolis

In terms of geographical and regional setting the *Maluk Chardak hoard* is placed in the middle of the Thracian valley of Plovdiv, some 20 km north-west from the ancient town of *Philippopolis*.<sup>26</sup> Unfortunately, it was found in an uncertain archaeological context<sup>27</sup>, despite the intensity of numismatic data from the region. However, the nearby presence of a group of burial mounds and an ancient road along the river of Pyasuchnik (north tributary to Hebros/Maritsa), suggests its clear relation to the local Thracian milieu. Additional proof is the inclusion of a Thasian imitation tetradrachm, so typical of the region.

A chronological overview of hoards containing Republican *denarii* reported around *Philippopolis* (modern regions of Plovdiv, Pazardzhik and Smolyan) shows the following:

No.	Hoard / area	Reference	Closing date	Number of denarii	Total no. of coins
1.	Iskra (Popovo) / 1929, Parvomay	Mouchmov 1931, 316; IRRCHBulg, no. 28	Not listed, data insufficient, 1 <sup>st</sup> c. BC ?	800+	800+
2.	Starosel I / 1933, 26 km NW	Unpublished <sup>4</sup> , Plovdiv Museum, nos. 1749-1750	After 116/5 BC	2	2+
3.	Smolyan / 1975	Прокопов 1991, 11 19-20, figs.23-30; IRRCHBulg, no. 61	56 BC	7	8
4.	Karavelovo / 1959, Karlovo	IGCH 978; IRRCHBulg, no. 108	54 BC	36	40
5.	Ognyanovo / 1987, Pazardzhik	Unpublished <sup>5</sup> , Pazardzhik Museum, nos. 2401-2408	49 BC	8	10
6.	Bolyarino / 1963, Rakovski, 35 km E	IGCH 975; Callatay – Prokopov 1995, 5-12; IRRCHBulg, no. 102	48 BC	7	30
7.	Eleshnitsa / 1956, Hissarja	Цончев 1960, 210 <sup>6</sup> ; IRRCHBulg, no. 15	48 BC	7	7+
8.	Vetren / 1977, Pazardhik, 47km W	CH 7.141; IRRCHBulg, no. 131	47 BC	3	8+
9.	Pavelsko / 1975, Assenovgrad, 48 km S	CH 6.45; IRRCHBulg, no. 123	47/6 BC	3	8+
10.	Starosel II – 'Kozi gramadi' / 2005, 30km NW	Христов 2006, pp. 85-86, cat. nos. 20-27,30 <sup>7</sup>	46 BC	8	8+
11.	Kapitan Dimitriev / 1991, Pazardzhik, 32km SW	IRRCHBulg, no. 30; CCCHBulg. II/1, nos. 626-681	41 BC	55	120+
12.	Maluk Chardak / 1990	[THIS HOARD]	39 BC	527	529+
13.	Topolovo / 1961, 52km SE	Герасимов 1963, 265; Колев 1968, 159; RRCH 457; IRRCHBulg, no. 129	30-29 BC	130	170

<sup>25</sup> Cf. *supra* note 6.

<sup>26</sup> This paper does not interfere with the status and significance of *Philippopolis* for the period under study (see recently Топалилов 2008, 162-203).

<sup>27</sup> Cf. *supra* notes 4-5.

Although some of the above listed hoards are preserved only in fragments, one can observe an apparent and active pattern of hoarding in the late 50s–40s BC. The majority of these hoards are closing with issues of Caesar and his contemporaries – falling right between the battles at Pharsalus in 48 BC and at Philippi in 42 BC. This implies that specific reasons caused this intensive hoarding. An eventual explanation will include the dramatic changes and uncertainty in the region of Plovdiv around the time of the deposition of the *Maluk Chardak 1990 hoard*.

## Малък Чардак 1990 край Пловдив: непубликувана къснорепубликанска монетна находка от Тракия

Иля ПРОКОПОВ, Евгени ПАУНОВ

(Резюме)

Настоящата статия разглежда една значителна по обем (над 530 броя) монетна находка от средата на I в. пр. Хр., открита край село Малък Чардак, общ. Съединение, Пловдивско. Вече двадесетина години, както и много други монетни съкровища из българските музеи, и това е останало необнародвано и неизвестно. Откритието е станало случайно през пролетта на 1990 г. в местността „Перето“ в северозападния край на селото. При разширяване на канал с трактор трима работници намерили и извадили поне 417 сребърни монети. Скоро след това, екип от музея в Пловдив провел теренно проучване и частични сондажи на мястото, при които били намерени още 112 монети и една сребърна гривна. В този вид – общо 529 монети, находката е постъпила в нумизматичната колекция на Пловдивския археологически музей (инв. №№ 5769-5760).

Регистрирани обекти (в АКБ) или други археологически находки от землището на това село не са известни, а най-близкото антично селище отстои само на 2 км северо -

край с. Голям Чардак (Цончев 1950, 254). Една внушителна група от 6-7 тракийски надгробни могили /непроучени/ обаче се простира в полето между двете селища, на десния бряг на р. Паясьчник.

Гривната е затворена отгоре (*обр. 1a-б*), с размери 4,1x3,7 см. и тегло 21,155 гр. Изработена е от тънка плоска сребърна пластина с успоредно пресичащи се и увити около тялото краища. Типът е популярен в Северна Тракия и Дакия в периода II век пр.Хр. - I век сл. Хр. (Тонкова 2006, 434-436; Slokoska 1991), особено в съкровища с или без монети.

Монетите в находката от Малък Чардак са от два различни сребърни номинала. Огромното мнозинство са римски републикански денари – 527 броя, заедно с 2 тетрадрахми. Едната е на град Атина от т. нар. „Нов стил“ (*обр. 2*), с имената на магистратите ΕΠΙΓΕΝΗ – ΣΩΣΑΝΔΡΟΣ – ΚΑΛΛΙΚΡΑ (тип Thompson 1961, 173, no. 442c-d), отсечена в 126-125 г. пр. Хр. (Boehringer 1972, 201).

Другата тетрадрахма е местна имитация на тасоски тип (*обр. 3*), изпълнена в груб варваризиран стил (Göbl 1973, klass V, taf. 48-49; Lukanc 1996, pls. 150-151). Тя попада в група 3 на това имитативно монетосечене (Prokopov 2006, 56; Prokopov 2011a (под печат), pl. 3, 12). При нея монетните легенди изчезват напълно и са предадени като поредица от безсмислени точки и линии, а образите на Дионис и Херакъл са сведени до пълна абстракция. Групата се датира в периода около 60-40 г. пр. Хр., както показват и останалите монети в съкровището.

Сред денарите един екземпляр е от т. нар. „дакийски имитации“ (*обр. 4*). Той е хибриден (смесен) тип, като лицето принадлежи на прототип на магистрата C. Calpurnius Piso L.f. Frugi (Cr. 408/1), а гърба – на прототип на Q. Minucius M.f. Thermus, 103 г. (Cr. 319/1). Очевидно тази имитация е отсечена след 61 г. сл.Хр.

Републиканските денари (520 броя идентифицирани, вж. *таблица 1*) са отсечени от мнозинство монетни магистрати в Рим. Най-ранните монети са анонимни денари (без отбелязан магистрат) на римската монетарница от 189-180 г. пр.Хр. (Cr. 141/1), а най-късната – издание на Марк Антоний и Октавиан (Cr. 528/2b), отсечено в италийско походно ателие в края на 40 – началото на 39 г. пр. Хр.

Монетното съкровище от Малък Чардак е най-представителният и обемен комплекс от римски републикански денари известни досега от Тракия (сравни находките в *IRRCHBulg*, 2002). Множеството денари в него са от края на II и първата четвърт на I век пр. Хр. Най-големият „пик“ в съдържанието му (вж. графика, *обр. 5*) са емисии от година 90 пр. Хр. (Cr. № 340, 341 и 342) – общо 60 екземпляра (11%). Притокът на денари, отсечени след 77 г. (Cr. 387/1) рязко намалява в находката. Изненадващо, липсва не само масовата серия на Цезар „слон надясно / жречески символи“ (Cr. 443/1), но и изобщо всички типове на Цезар и неговите сподвижници отсечени до 44 г. пр. Хр. Денари отсечени между 44-42 г. също не присъстват. Определено, тези „страниности“ в състава отличават съкровището от Малък Чардак от останалите находки от южна Тракия.

В заключение, авторите предполагат, че тази находка е била натрупана в цялостта си извън пределите на Тракия (в римска Македония или Ахая), най-вероятно като заплати на наемници. Последни в нея са били добавени само варварската имитация на тасоска тетрадрахма и имитативния денар. Укриването ѝ в землището на дн. село Малък Чардак край Пловдив трябва да се постави непосредствено след 39 г. пр. Христа.

Накрая е представен кратък обзор на всички известни находки с римски републикански монети (*таблица 3*) от района на Филипопол (областите Пазарджик, Смолян и Пловдив). Макар и в повечето случаи данните за тях да са фрагментарни (или зле публикувани), наблюдава се едно видимо струпване на съкровища, укрити през 50-40-те години на I век пр. Хр. Това е явление, което се нуждае от допълнително проучване.
